

110TH CONGRESS
2D SESSION

H. R. 5527

To amend the Safe Drinking Water Act to protect the health of susceptible populations, including pregnant women, infants, and children, by requiring a health advisory, drinking water standard, and reference concentration for trichloroethylene vapor intrusion, and for other purposes.

IN THE HOUSE OF REPRESENTATIVES

MARCH 4, 2008

Mr. HINCHEY (for himself, Mr. HALL of New York, Mr. SESTAK, and Mrs. GILLIBRAND) introduced the following bill; which was referred to the Committee on Energy and Commerce

A BILL

To amend the Safe Drinking Water Act to protect the health of susceptible populations, including pregnant women, infants, and children, by requiring a health advisory, drinking water standard, and reference concentration for trichloroethylene vapor intrusion, and for other purposes.

1 *Be it enacted by the Senate and House of Representa-*
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE; TABLE OF CONTENTS.**

4 (a) SHORT TITLE.—This Act may be cited as the
5 “Toxic Chemical Exposure Reduction Act of 2008” or the
6 “TCE Reduction Act of 2008”.

1 (b) TABLE OF CONTENTS.—The table of contents of
 2 this Act is as follows:

Sec. 1. Short title; table of contents.

Sec. 2. Findings and purpose.

TITLE I—HEALTH ADVISORY AND NATIONAL PRIMARY DRINKING
 WATER REGULATION FOR TRICHLOROETHYLENE

Sec. 101. Health advisory and national primary drinking water regulation for
 trichloroethylene.

TITLE II—REDUCING DANGEROUS VAPOR INTRUSION FROM
 CONTAMINATED GROUNDWATER AND SOILS

Sec. 201. Health advisory and reference concentration for trichloroethylene.

3 **SEC. 2. FINDINGS AND PURPOSE.**

4 (a) FINDINGS.—Congress finds that—

5 (1) trichloroethylene is a metal degreaser and
 6 an ingredient in adhesives and paint removers;

7 (2)(A) waste from the use and improper dis-
 8 posal of chemicals containing trichloroethylene is
 9 widespread in soil and water;

10 (B) more than 1,000 waste sites in the United
 11 States are contaminated with trichloroethylene;

12 (C) it is well documented that individuals in
 13 many communities are exposed to trichloroethylene
 14 and experience associated health risks;

15 (D) certain human subpopulations might be at
 16 increased risk to trichloroethylene exposure because
 17 of age, genetic polymorphisms, or preexisting dis-
 18 eases; and

1 (E) in utero exposure to trichloroethylene has
2 been associated with birth defects and childhood dis-
3 eases, including cancer;

4 (3) according to the report of the National
5 Academy of Sciences entitled “Assessing the Human
6 Health Risks of Trichloroethylene: Key Scientific
7 Issues”—

8 (A) acute exposures to trichloroethylene oc-
9 ccurring as a result of occupational industrial
10 accidents are associated with nerve damage and
11 residual neurological deficits, including memory
12 loss;

13 (B) high-concentration exposure to air con-
14 taminated with trichloroethylene—

15 (i) causes nervous system damage;

16 (ii) has been associated with general-
17 ized skin eruptions and other more severe
18 skin and mucus membrane conditions, such
19 as Stevens-Johnson syndrome; and

20 (iii) can cause liver dysfunction, lead-
21 ing to jaundice, hepatomegaly, and hepatic
22 encephalopathy;

23 (C) trichloroethylene in drinking water can
24 alter the therapeutic action of medications, in-
25 cluding anticoagulants and barbiturates;

1 (D) evidence regarding carcinogenic risk
2 and other health hazards from exposure to tri-
3 chloroethylene has strengthened since 2001,
4 and there is strong evidence that exposure to
5 trichloroethylene in a dose-dependent manner is
6 associated in humans with increased rates of—

7 (i) kidney cancer; and

8 (ii) leukemia;

9 (E) exposure to mixtures of volatile or-
10 ganic compound contaminants in groundwater,
11 in combination with trichloroethylene, can accel-
12 erate tumor growth in humans; and

13 (F) evidence from animal-related and epi-
14 demiological studies suggests that several repro-
15 ductive and developmental toxicity end-points
16 may be associated with trichloroethylene expo-
17 sure, including—

18 (i) infertility in males and females;

19 (ii) impaired intrauterine growth and
20 development; and

21 (iii) cardiac teratogenesis;

22 (4) the report referred to in paragraph (3) rec-
23 ommended the use of currently available data to fi-
24 nalize a risk assessment to ensure that risk manage-
25 ment decisions can be made expeditiously;

1 (5)(A) exposures to volatile organic compound
2 vapors from migration to indoor air have become a
3 concern at sites throughout the United States, in-
4 cluding many Superfund sites under the Comprehen-
5 sive Environmental Response, Compensation, and
6 Liability Act of 1980 (42 U.S.C. 9601 et seq.);

7 (B) potential routes of exposure to trichloro-
8 ethylene exist with respect to susceptible popu-
9 lations, even at sites at which no current drinking
10 water pathways of exposure are known to exist; and

11 (C) in September 2002, the Office of Solid
12 Waste and Emergency Response of the Environ-
13 mental Protection Agency released an external re-
14 view draft entitled “Evaluating the Vapor Intrusion
15 to Indoor Air Pathway from Groundwater and Soils”
16 that focuses specifically on those exposures;

17 (6)(A) in 2006, the United States Geological
18 Survey published a report entitled “Volatile Organic
19 Compounds in the Nation’s Ground Water and
20 Drinking-Water Supply Wells”;

21 (B) as of the date of enactment of this Act, the
22 long-term investigation by the national water-quality
23 assessment program of the United States Geological
24 Survey provides the most comprehensive national
25 analysis of the occurrence of volatile organic com-

1 pounds in ground water, based on results of sam-
2 pling between 1985 and 2002; and

3 (C) among the major findings developed under
4 the program described in subparagraph (B) are—

5 (i) that volatile organic compounds were
6 detected in most aquifers throughout the
7 United States and were not limited to few spe-
8 cific aquifers or regions;

9 (ii) the most frequently detected volatile
10 organic compounds are chloroform, the solvents
11 perchloroethylene and trichloroethylene, and the
12 gasoline oxygenate methyl tertiary butyl ether;

13 (iii) 5 of the 29 regulated volatile organic
14 compounds had 1 or more concentrations great-
15 er than applicable maximum contaminant levels
16 that generally occurred in highly populated
17 areas of the United States, including 1,1-DCE,
18 methylene chloride, perchloroethylene, trichloro-
19 ethylene, and vinyl chloride;

20 (iv) the solvents perchloroethylene and tri-
21 chloroethylene comprised approximately $\frac{3}{4}$ of
22 the concentrations of potential concern;

23 (v) trichloroethylene was detected at levels
24 ranging from 0.002 to over 110 micrograms per
25 liter; and

1 (vi) as of the date of enactment of this
2 Act, the maximum contaminant level for tri-
3 chloroethylene is 5 micrograms per liter; and

4 (7) the document of the Environmental Protec-
5 tion Agency entitled “Draft Trichloroethylene
6 Health Risk Assessment: Synthesis and Character-
7 ization” and dated 2001—

8 (A) stated that the Agency for Toxic Sub-
9 stances and Disease Registry—

10 (i) reports that trichloroethylene is the
11 most frequently reported organic contami-
12 nant in groundwater; and

13 (ii) has estimated that between 9 and
14 34 percent of drinking water supply
15 sources have some trichloroethylene con-
16 tamination; and

17 (B) recommended extrapolation to lower
18 doses for oral exposure of trichloroethylene in
19 drinking water, resulting in a maximum con-
20 taminant level of 1 microgram per liter.

21 (b) PURPOSE.—The purpose of this Act is to require
22 the Administrator of the Environmental Protection Agen-
23 cy—

24 (1) to establish, by not later than 180 days
25 after the date of enactment of this Act—

1 (A) a health advisory, including cancer
2 risks, for trichloroethylene in drinking water
3 that fully protects susceptible populations (in-
4 cluding pregnant women, infants, and children),
5 taking into consideration body weight, exposure
6 patterns, and all routes of exposure to trichloro-
7 ethylene; and

8 (B) an integrated risk information system
9 reference concentration of trichloroethylene that
10 is protective of the susceptible populations iden-
11 tified in subparagraph (A) from vapor intru-
12 sion, taking into consideration the factors de-
13 scribed in that subparagraph; and

14 (2) to promptly establish a national primary
15 drinking water regulation for trichloroethylene that
16 fully protects susceptible populations (including
17 pregnant women, infants, and children), taking into
18 consideration body weight, exposure patterns, and all
19 routes of exposure to trichloroethylene.

1 **TITLE I—HEALTH ADVISORY**
2 **AND NATIONAL PRIMARY**
3 **DRINKING WATER REGULA-**
4 **TION FOR TRICHLORO-**
5 **ETHYLENE**

6 **SEC. 101. HEALTH ADVISORY AND NATIONAL PRIMARY**
7 **DRINKING WATER REGULATION FOR TRI-**
8 **CHLOROETHYLENE.**

9 Section 1412(b)(12) of the Safe Drinking Water Act
10 (42 U.S.C. 300g–1(b)(12)) is amended by adding at the
11 end the following:

12 “(C) TRICHLOROETHYLENE.—

13 “(i) HEALTH ADVISORY.—Notwith-
14 standing any other provision of this sec-
15 tion, not later than 180 days after the date
16 of enactment of this subparagraph, the Ad-
17 ministrator shall publish a health advisory,
18 including cancer risks, for trichloroethylene
19 that fully protects, with an adequate mar-
20 gin of safety, the health of susceptible pop-
21 ulations (including pregnant women, in-
22 fants, and children), taking into consider-
23 ation body weight, exposure patterns, and
24 all routes of exposure.

1 “(ii) NATIONAL PRIMARY DRINKING
2 WATER REGULATION.—

3 “(I) PROPOSED REGULATION.—

4 Notwithstanding any other provision
5 of this section, not later than 1 year
6 after the date of enactment of this
7 subparagraph, the Administrator shall
8 propose a national primary drinking
9 water regulation for trichloro-
10 ethylene—

11 “(aa) that is protective of
12 susceptible populations (including
13 pregnant women, infants, and
14 children); and

15 “(bb) the maximum con-
16 taminant level of which is as
17 close to the maximum contami-
18 nant level goal for trichloro-
19 ethylene, and as protective of
20 those susceptible populations, as
21 is feasible.

22 “(II) FINAL REGULATION.—Not-
23 withstanding any other provision of
24 this section, not later than 18 months
25 after the date of enactment of this

1 subparagraph, after providing notice
2 and an opportunity for public com-
3 ment, the Administrator shall promul-
4 gate a final national primary drinking
5 water regulation (including a provi-
6 sion for monitoring under subclause
7 (III)) for trichloroethylene that is con-
8 sistent with subclause (I).

9 “(III) MONITORING REQUIRE-
10 MENTS.—

11 “(aa) DEFINITION OF
12 QUALIFYING SYSTEM.—In this
13 subclause, the term ‘qualifying
14 system’ means a public water
15 system that has been granted a
16 monitoring waiver under section
17 141.24 of volume 40, Code of
18 Federal Regulations (or successor
19 regulations).

20 “(bb) REQUIREMENTS.—
21 The regulation under subclause
22 (II) shall include a provision re-
23 lating to monitoring that re-
24 quires—

1 “(AA) that the Admin-
2 istrator shall revise moni-
3 toring requirements for all
4 systems to ensure detection
5 of potential trichloroethylene
6 contamination and full com-
7 pliance with the revised na-
8 tional primary drinking
9 water regulation;

10 “(BB) for each quali-
11 fying system located in the
12 vicinity of a subsurface mi-
13 gration of a known volatile
14 organic compound contami-
15 nation site, that the State
16 with primary enforcement
17 responsibility shall review
18 and submit the waiver of the
19 qualifying system for review
20 by the Administrator; and

21 “(CC) each qualifying
22 system potentially located in
23 the path of subsurface mi-
24 gration of a known volatile
25 organic compound be subject

1 to minimum regular moni-
2 toring for trichloroethylene,
3 as the Administrator and
4 primary State officials deter-
5 mine to be appropriate.

6 “(iii) CONSUMER CONFIDENCE RE-
7 PORTS.—

8 “(I) IN GENERAL.—Subject to
9 subclause (II), simultaneously with
10 the promulgation of the final regula-
11 tion under clause (ii)(II), each con-
12 sumer confidence report issued under
13 section 1414(c)(4) shall disclose the
14 presence of any trichloroethylene in
15 drinking water, and the potential
16 health and cancer risks to susceptible
17 populations (including pregnant
18 women, infants, and children) from
19 exposure to trichloroethylene in drink-
20 ing water, consistent with regulations
21 promulgated by the Administrator.

22 “(II) EXCEPTION.—Notwith-
23 standing subclause (I), trichloro-
24 ethylene shall not be considered to be
25 1 of the 3 regulated contaminants de-

1 scribed in the matter following clause
2 (vi) of section 1414(c)(4)(B).”.

3 **TITLE II—REDUCING DAN-**
4 **GEROUS VAPOR INTRUSION**
5 **FROM CONTAMINATED**
6 **GROUNDWATER AND SOILS**

7 **SEC. 201. HEALTH ADVISORY AND REFERENCE CON-**
8 **CENTRATION FOR TRICHLOROETHYLENE.**

9 (a) HEALTH ADVISORY.—Not later than 1 year after
10 the date of enactment of this Act, the Administrator of
11 the Environmental Protection Agency (referred to in this
12 section as the “Administrator”) shall publish a health ad-
13 visory (including cancer risks) for trichloroethylene that
14 fully protects from vapor intrusion, with an adequate mar-
15 gin of safety, the health of susceptible populations (includ-
16 ing pregnant women, infants, and children), taking into
17 consideration body weight, exposure patterns, and all
18 routes of exposure.

19 (b) ESTABLISHMENT AND APPLICATION OF REF-
20ERENCE CONCENTRATION.—

21 (1) ESTABLISHMENT OF REFERENCE CON-
22CENTRATION.—Not later than 18 months after the
23date of enactment of this Act, the Administrator
24shall establish an integrated risk information system
25reference concentration of trichloroethylene vapor

1 that is protective of susceptible populations (includ-
2 ing pregnant women, infants, and children), con-
3 sistent with the health advisory described in sub-
4 section (a).

5 (2) REMEDIAL ACTION.—Not later than 2 years
6 after the date of enactment of this Act, the Adminis-
7 trator shall apply the reference concentration estab-
8 lished under paragraph (1) with respect to any po-
9 tential vapor intrusion-related investigations or ac-
10 tions to protect public health with respect to tri-
11 chloroethylene exposure carried out pursuant to the
12 Comprehensive Environmental Response, Compensa-
13 tion, and Liability Act of 1980 (42 U.S.C. 9601 et
14 seq.), the Safe Drinking Water Act (42 U.S.C. 300f
15 et seq.), or the Solid Waste Disposal Act (42 U.S.C.
16 6901 et seq.).

○
